- Computer science and engineering professional keenly interested in coding and problem solving.

Skills

Tools	Visual Studio Code Docker Git Figma Beekeeper
Programing language	C/ C++ C# PHP(yii2/Laravel) Python(basics)
Others	SQL PGSQL GULP Bulma JavaScript CSS HTML

Experience

June 2021- Present

Mangalore Infotech Solution Pvt. Ltd. , Mangalore (Software Engineer)

Key Qualification & Responsibilities

- Experience in developing UI screens and integrating it with the applications along with creating Technical Design Document (TDD) and Functional Design Document (FDD).
- In-depth knowledge and experience in Requirement gathering/Analysis, Design,Development, Testing and Documentation.
- Took the lead in delivering complex functionalities.
- Implementing Reusable code and following best practices.
- Worked on pre and post production issues.
- Working with dynamic team and helping them in all the aspects along with Mentoring new hires.

Project: UniCourt SITE/SEO (June 2021 - Present)

UniCourt is making court data more accessible and useful through Legal Data as a Service (LDaaS). UniCourt Legal Data APIs provide AmLaw firms and Fortune 500 companies with real-time access to normalized court data for business development and intelligence, analytics, machine learning models, process automation, background checks, investigations, and underwriting.

As a part of an **engine optimisation team** I'm involved in **site development projects**. As a Full Stack Developer, I used the **PHP Yii-2** framework as the backend and **HTML** to structure the layouts, as well as **Bulma** to handle most of the **CSS** operations. Utilize **PYTHON snippets** for easy background task automation. **REDIS Cache** is used for the performance of the page and all other performance factors. Also complete project structure is in the **Model View Architecture** and also over the view we have created the **Data Access Layer** for the easy changes and migration of the codes, Recently migrated the database from **MYSQL** to **PostgresQL**.

Technologies Used: **Core PHP(yii2 Framework), JavaScript, HTML5, CSS, GULP**

Tools Used: **Visual Studio, VS Code, Docker ,GitLab, Jira.**

B. E. Thesis project: Platform for marketing of agricultural materials via online platform (August 2020 - February 2021)

Agriculture marketing is inferred to cover services involved in moving an agricultural product from the farm to the targeted consumer. The main objective of agriculture marketing is to reduce the cost of marketing and to help farmers to get a deserved price for their products. This project would help the small farm holders to find multiple buyers who are willing to pay at a high price.

Technologies Used: **Dart, Java, PHP, JavaScript, HTML, CSS, MYSQL**

Tools Used: **Android Studio, PHPMYADMIN, Git, Postman**

Achievements

- Smart India Hackathon 2020 finalist. National level hackathon conducted by the government of India(March 2020).

- Grabbed the 2nd place in Hackridea during Incridea, the national level techno-cultural fest of NMAMIT, Nitte(February 2020).
- Conducted Atal Tinkering Lab workshops for High-school students at Govt High-school, Hiriadka and Jawahar Navodaya Vidyalaya, Hebri(October 2019).
